Scepter
SYMBOL OF QUALITY

The importance of military packaging has been overlooked for decades, in fact some packaging methods pre-date World War 1. They were not very good, but it was the best available at the time.

Now there's something better!

Scepter is committed to develop and produce high quality plastic packaging products that meet or exceed customer expectations and requirements, and that are compliant with local and international packaging standards for safe storage and transport.

Scepter offers a wide range of advanced injection and blow moulded plastic military packaging products for large caliber ammunition, fuel and water as well as a range of accessories.

The Scepter military containers for ammunition and fuel / water are developed and engineered in close cooperation with international military entities and with partners who develop, produce and supply large caliber ammunition. Users globally continue to reap the benefits of Scepter's light-weight high quality plastic products that meet transport and storage standards issued by United Nations Committee of Experts on the Transport of Dangerous Goods. By extension, Scepter's products meet the requirements of The International Civil Aviation Organization (ICAO) and the International Maritime Organization who both govern packaging requirements conforming to the UN Committee's recommendations.

Scepter is a company of the future, ready for the challenges of tomorrow!

Scepter offers containers for large caliber ammunition used by Infantry, Artillery, Armour and Navy units.

The containers accommodate calibers ranging from 60mm Mortar to 155mm and in single, twin, triple and quad configurations. Scepter continuously works with military and industry partners on developing and supplying new container variants at minimum cost by means of modular tooling and mould configurations and a variety of internal dunnage in the containers tailored to specific rounds.

Scepter's ammunition containers are...

COST EFFECTIVE:

- Withstand extreme weather conditions ie. heat, cold, humidity
- Waterproof
- Corrosion and fungus resistant
- Positive inventory control and security
- Easily NBCW decontaminated
- Excellent long term storage, reduced inspection and maintenance
- Reduced loss from rough handling
- Reusable, reducing life-cycle costs

USER FRIENDLY:

- Man portable
- Easy access to ammunition
- Easily palletized to form unit loads
- Reduced weight
- Minimal dunnage, reduced battlefield debris
- Reduced noise levels during handling
- Easy identification of contents
- Recoverable and reusable in forward battle area
- Protects against NBCW contaminants
